1. Introduction

1.1 Purpose

This User Acceptance Testing (UAT) document validates that SPBANKLENS 360 — the Enterprise Banking Operations & Risk Intelligence Platform — meets the operational, risk-monitoring and supervisory needs of Branch, Regional Office and Central Office users. It captures the test approach, role-wise scenarios, expected vs. actual outcomes, defect tracking and formal sign-off.

1.2 Objectives

- Confirm that every implemented module behaves per the agreed Business and Functional Requirements.
- Validate role-based access for Branch, Regional, Central and Administrator users.
- Verify that data displayed on dashboards, Account 360, Knowledge Notebook, Workflow, Risk Engine, Recovery, NPA, Legal, CGTMSE, Inspection and MIS reports is consistent and explainable.
- Confirm reminder, escalation and notification logic operates within defined windows.
- Establish a baseline defect log and acceptance evidence prior to production roll-out planning.

1.3 Scope

In-scope: all 16 modules delivered in v1.0 Prototype — Login & Security, Branch / Regional / Central dashboards, Account 360, Knowledge Notebook 2.0, Workflow Centre, Risk Intelligence (Data Hub + Rule Engine + EWS + Task Generation), Recovery, NPA, Legal, CGTMSE, Inspection, MIS Reports, Notifications, Global Enterprise Search and Administration.

Out-of-scope: live CBS / LOS integration, production identity provider (AD/SSO), payment gateways and any module marked as 'Future Roadmap'.

1.4 Intended Users

- Branch Officers and Branch Managers
- Regional Office Supervisors
- Central Office Risk and Governance teams
- Administrators (Security and Configuration)
- Internal QA and Business UAT panels

1.5 Success Criteria

- 100% of P1 scenarios executed with Pass status.
- $\geq 95\%$ of P2/P3 scenarios executed with Pass status; remainder logged as defects with severity.
- No Critical or High severity defects open at sign-off.
- Sign-off obtained from Branch, Regional, Central and Project Owner representatives.
